## EDUCATION

---

**Adana Alparslan Türkeş Science and Technology University**

*Bachelor of Science in Computer Engineering*

Adana, Turkey

Sep. 2024 – June 2028

## EXPERIENCE

---

**Software Engineer Intern**

*DropGPT*

March 2026 – April 2026

*Remote*

- Developed an AI system for the dropshipping domain using Retrieval-Augmented Generation using LangChain and FAISS Libraries.

## PROJECTS

---

**Solar Energy Optimization & Demand Forecasting | Python**

Nov. 2025 – Present

- Developed an optimization model for solar energy demand forecasting using Python.
- Currently co-authoring an academic paper based on the research findings and model evaluations.
- Experimented with data forecasting using Scikit-learn and mathematical constraints via Pyomo.

**Offline-Capable CV & RAG Framework (IAF) | Python, RAG, YOLOv5**

Jan. 2026 – Present

- Orchestrating a multi-stage pipeline using LangChain, utilizing YOLOv5 for real-time object detection on live video feeds to trigger deterministic vector database similarity searches for 77th International Astronautical Congress 2026.

## TECHNICAL SKILLS

---

**Languages:** Java, Python, C, C, JavaScript, HTML/CSS, Shell

**Developer Tools:** Git, Google Cloud Platform, VS Code, Visual Studio, PyCharm, IntelliJ, Eclipse

**Libraries:** pandas, NumPy, Matplotlib, Pyomo, scikit-learn, XGBoost, pymavlink
