## EDUCATION

**Adana Alparslan Türkeş Science and Technology University**

*Bachelor of Science in Computer Engineering*

Adana, Türkiye

*Oct. 2024 – Jun 2028*

## EXPERIENCE

**Software Engineer Intern**

*DropGPT*

March 2026 – April 2026

*Remote*

- Developed an AI system for the dropshipping domain using Retrieval-Augmented Generation using LangChain and FAISS Libraries.

## PROJECTS

**StellAgent** | *Tech Demonstration, Project Pitching, Team Collaboration*

March 2026

- Facilitated the conceptual pitching and technical demonstration of an autonomous local command-line toolkit during the TUA Astro Hackathon.
- Collaborated closely with the core development team to structure the project narrative and present agentic workflows effectively to the jury.
- Managed the product testing and functional delivery processes in a high-pressure environment to meet strict competition deadlines.

**RomAI** | *Python, Pandas, Scikit-learn, XGBoost*

March 2026

- Co-developed a gene data classification platform within a 48-hour health-focused hackathon challenge (BREATHE4HEALTH Hackathon 2026, organized by the Innovation in Health Community.)
- Trained and evaluated predictive machine learning models using XGBoost and Scikit-learn to categorize complex genetic data structures.
- Integrated data cleaning and processing pipelines using Pandas and NumPy to ensure high model accuracy.

**PhanarAI** | *RAG Architecture, Server Deployment, Python, UI/UX*

April 2026

- Co-developed an AI-driven platform with the Fenerbahçe Team during the Anadolu Hackathon organized by Yandex Türkiye.
- Architected and implemented a Retrieval-Augmented Generation (RAG) pipeline to meet project requirements for complex data querying.
- Executed the server-side deployment of the AI model and integrated it into the web architecture, alongside co-designing responsive frontend components.

**CalHelper** | *Python, Fast, React, PostgreSQL, Docker*

June 2026

- Designed and developed the frontend user interface for a complex document processing and OCR platform during the USAII Global AI hackathon 2026.
- Implemented responsive web components and interactive layouts using vanilla JavaScript, HTML5, and CSS3.

**Dynamic Portfolio Website** | *JavaScript, GitHub Actions, CI/CD, i18n, Custom UI/UX*

June 2026

- Architected a fully custom, template-free responsive portfolio website from scratch, establishing a unique design system and optimizing front-end performance.
- Engineered a CI/CD automation pipeline utilizing GitHub Actions to dynamically fetch, synchronize, and deploy live repository updates without manual intervention.
- Developed and integrated a custom client-side internationalization (i18n) infrastructure to provide seamless multi-language support and enhance global user accessibility.

## TECHNICAL SKILLS

**Languages:** Python, Java, C/C++, JavaScript, HTML/CSS, Shell

**Frameworks:** FastAPI, LangChain

**Developer Tools:** Git, Google Cloud Platform, VS Code, Visual Studio, PyCharm, IntelliJ, Eclipse

**Libraries:** Pandas, NumPy, Matplotlib, Pymavlink, FAISS
